To Whom it may concern,

Re: Lot. 359 Fiorente – Lacey Underall the 2020 bay Thoroughbred colt

Brands: Lt: PK3 Rt: 15 over 0

Microchip: 985100012188410

The above colt has a small soft tissue swelling on the upper dorsal aspect of his left fore cannon bone. This is a result of a previous wound to the area. It is not painful to palpate and there is very mild smooth modelling on the dorsal cannon bone associated with this swelling.
It is in our opinion of very low clinical significance.

Yours sincerely,

T W Pearce BVSc BAgSc
